Company description

Contelinera develops innovative technological solutions for electric vehicle charging, including last mile electric containers, acting as a Charging Operator. It is focused on sustainable electric vehicle charging applications for urban and industrial environments, highways, roads and motorways.

Products and services

Module or function

Safety electronics / vehicle dynamics

Charging infrastructures for electric vehicles: installation, operation and commercial exploitation of fast, semi-fast and portable charging points. It offers energy management services, remote supervision and automated digital charging through its own platform. Integrates hardware (chargers) and software (operation and payment backend).

Auxiliary services

- Diverse
- Engineering
- Industrial supplies
- Machinery and small integrated lines
- Maintenance and services

Installation of charging points, operation as CPO (Charge Point Operator), preventive and corrective maintenance, integration of software solutions for charge management, and associated energy services (pricing, power control, etc.).

Processes and technologies

Other technologies

Selection and integration of chargers, approved electrical installation, configuration of control backend, communication tests with payment and monitoring platforms. Development of energy management software and optimisation of consumption based on the available network.

Main customers

Public administrations, logistics companies, shopping centres and electric fleet owners.
